

Tested positive for the coronavirus:

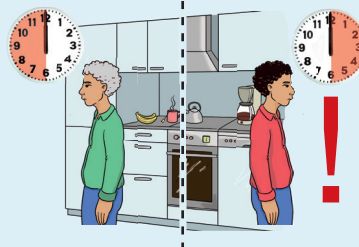

what then?

Even if you are doing well, you are highly contagious
and a **threat for other people.**

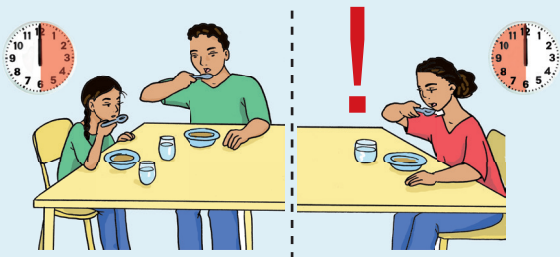

Two weeks of quarantine for you and your family:
you are not allowed to leave the house!

What do I have to do?

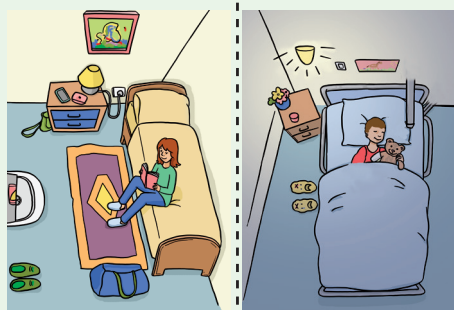

Do not use the **bathroom and kitchen at the same time** as other family members.

Eat at different times
than the rest of your family.

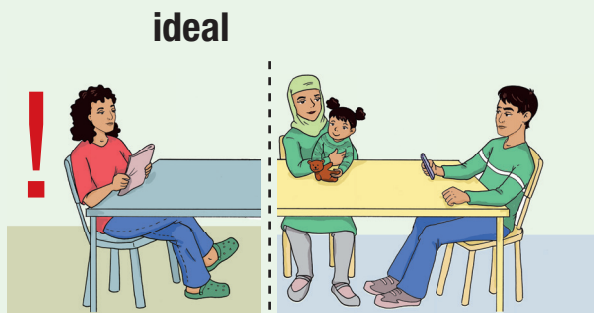

Take your temperature
twice per day, if possible, and
write it down daily.

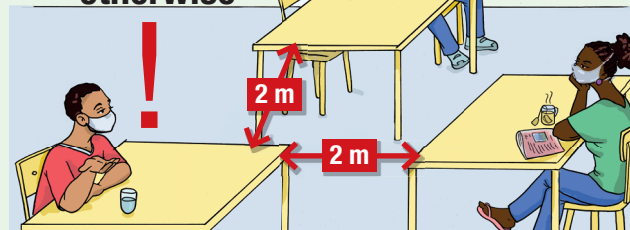

How do I protect my family?

Is a **child ill with the coronavirus disease**?
Any contact with its brothers and sisters must
be prevented!

**if not possible
otherwise**

Keep **distance** from each other.

Use your own towel
and change it daily.
